00 — Vision & Brand Foundation

Identity

Name	MÖBIUS MUSE
Tagline (canonical)	**Making Ideas Inevitable**
Brand colour	Deep Muse Blue `#0A2463`
Philosophy	"Good ideas do not need decoration, only their clearest possible form."
Visual direction	Infinity-loop ribbon with negative-space eye imagery; clear, restrained, engineering-oriented

Note: an earlier draft used the tagline "The Inevitable Form". It is retired. All content, lint rules and templates use "Making Ideas Inevitable" only.

What this engine must achieve

1. **Trust** — through the founder's authentic, documented story.
2. **Brand recognition** — one coherent Möbius Muse identity across channels.
3. **Demand** — qualified attention for Möbius Blueprint (the commercial product line for Kenyan schools) and, later, other products.

Priority order matters: Blueprint carries revenue intent; everything else carries brand.

Three connected stories (never separate brands)

1. **The founder** — a Kenyan educator and independent builder creating a technology company with AI, from an Android phone, showing real work. Purpose: trust, relatability, community.
2. **The company** — the philosophy, engineering discipline and ambition behind Möbius Muse; every project feeds one coherent story. Purpose: recognition, differentiation.
3. **The products** — demonstrations, use cases, lessons, eventually offers. Purpose: demand and revenue.

Audiences

- **Kenya / East Africa:** practical technology, local business and education problems, entrepreneurship, affordability, products built for local constraints. Blueprint targets school owners and administrators.
- **Global:** AI-assisted development, agent workflows, indie software, product-building lessons, the founder journey.
- **Shared narrative:** a Kenyan founder building useful technology with AI — showing the work, not claiming greatness.

Language & register

English is the default. Kenyan conversational register is used when a campaign targets Kenya. Sheng only where Samuel would naturally use it. The system never improvises register — it follows `brand/voice-fingerprint.md` (see `docs/05-learning-loop.md`).

The strategic stance: Proof-of-Work Marketing

Every public claim is anchored to a verifiable artifact (commit, CI run, deployed URL, APK, screenshot). We show receipts, not adjectives. The mechanism is specified in `docs/01-architecture.md` (Claims Registry) and enforced by CI (`docs/03-content-schema.md`). Authenticity here is a property of the architecture, not a style guide.
